DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 5, 7, and 8 rejected under 35 U.S.C. 102(b) as being anticipated by Burns (US 5458854).

3. As to claim 1, Burns teaches a one-piece collection container assembly comprising an elongate tubular housing having opposed first and second ends and a cylindrical wall therebetween defining a tubular interior (**See Figure 1**); and a solid partition **38** positioned within the housing between the first and second ends; the housing defining a volume for specimen collection therein between the first end and the partition; the second end comprising a false bottom end comprising a rounded open bottom end **47** extending from an arcuate shoulder (created by partition **38**, also see Figure 5 attachment below).

FIG-5

4. As to claim 5, Burns teaches an assembly wherein the partition is arcuate in shape to provide the volume for specimen collection with at least a partially rounded bottom portion.
5. As to claim 7, Burns teaches an assembly wherein the housing is a thermoplastic polymer.

6. As to claim 8, Burns teaches an assembly wherein the thermoplastic polymer is polyethylene terephthalate, polypropylene, polyethylene naphthalate, polyvinyl chloride or copolymers thereof.

Claim Rejections - 35 USC § 103

7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

8. Claims 6 and 9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Burns.

9. As to claim 6, Burns fails to specifically teach an assembly wherein the partition is conical in shape. However, the shape of the partition is a mere design choice that can be obtained through routine observation and experimentation. Furthermore, the Applicant fails to disclose why one particular shape would be advantages over another or what particular purpose is served by a conical shaped partition or how the specific shape provides an unexpected result.

10. As to claim 9, Burns fails to specifically teach an assembly wherein the housing has the particular dimensions as set forth by the claim. However, the Applicant fails to disclose why those particular dimensions are advantageous or what particular problem those specific dimensions solve. Furthermore, depending on the intended use, e.g.,

how much sample is to be collected, the dimensions of the housing will vary and such dimensions may also be derived through routine observation and experimentation.
